## Paving Specialist

### Sand spreading shovel

The Optimas spreader shovels have been devised to provide the extremely even distribution of various raw materials such as sand, chippings and earth on the sub-grade.

These devices are predominantly found in situations calling for the exact spreading of material for preparing the final layer of sub-grade and of joint material on freshly paved surfaces. In addition to the travel speed and variable oil pressure, the amount of material per unit area can also be adapted to the material in the spreader shovel by presetting the quantity throughput directly on the spreader shovel.

Used in combination with a universal adapter the spreader shovel can be attached to an extremely broad range of wheeled loaders.

Working width:	2 m
Capacity of shovel:	1m <sup>3</sup>
Weight:	380 kg
Drive:	hydraulic
